Industries Covered by Roy Morgan Research

Roy Morgan Research produces a variety of reports which are available on our Online Store. These include Customer Profiles, Satisfaction Reports, Intention Reports, Currency Reports and Market Indicator and Overview Reports. The reports range from broad overviews consisting of basic tables and charts, to more detailed analysis of specific industries. The industries covered by Roy Morgan Research include:

- Alcohol
- Automotive
- Banking and Finance
- FMCG
- Gambling
- Health and Wellbeing
- Media
- Retail •
- Sport
- Telecommunications
- Tourism

If you are unable to locate particular information please contact the Online Store as it is likely the data is available. Call 1800 633 813 or email enquiries@roymorganonlinestore.com

Introduction

About this Report

This target profile report provides a broad understanding of your target audience in terms of demographics, attitudes, activities and media usage. The information included in each of these areas is outlined below. Demographics include: Gender, Age, States, Education, Work Status, Income, Occupation, Socio-Economic Status*, Discretionary Expenditure*, Life-cycles and Household Lifecycle*, Generations* and the

- Roy Morgan Values Segments** for the target profile.
- Attitudes include: Health and Fitness, Government and Society, Environment, Personal, Shopping and Products, Food, Advertising and Media, Family and Home, Finance and Holidays.
- Activities include: Eating Out/Fast Food, Leisure Activities, General Entertainment, TV Sport Watched, Sports and Activities Participated In.
- This profile also includes the segmentation of the Roy Morgan Values Segments**
- Media includes an Overview of Media usage, Usage of Newspapers, Magazines, Commercial TV, Radio, Internet, Cinema, Addressed Mail, Unaddressed Mail, Type of Newspapers Read, Type of Magazines Read, Time of Day Watched TV, Channel Watched, and Type of TV Show Watched.
- There is also extra information included in the additional insights section, which includes topline information on: Holiday, Finance, Gambling, Telecommunications and Retail behaviours.

Roy Morgan Single Source

Roy Morgan Single Source has been designed and engineered to represent the ideal single source model. It provides an integrated understanding of consumers; what they are like, what they consume, what they buy, what they think, what they want, what they watch, read and listen to. In Australia, Roy Morgan Single Source incorporates approximately 50,000 face-to-face interviews in both city and country areas, each year with people aged 14+. Weekly interviewing is conducted continuously allowing for trending of data. Around 20,000 self-completion surveys provide enriched detail of consumption habits and attitudes. Of these around 16,000 are categorised as Main Grocery Buyers. The overriding benefit of Roy Morgan Single Source is the strategic insights it affords by the linkage of so many aspects. Not only can an organisation's (and its competitors') profitable customers be delineated by what they think, do and watch, but so can non-customers. Hence brand positioning, product differentiation, merchandising, efficient media planning, market expansion and line extension opportunities can be understood in the context of the current marketplace.

About Roy Morgan

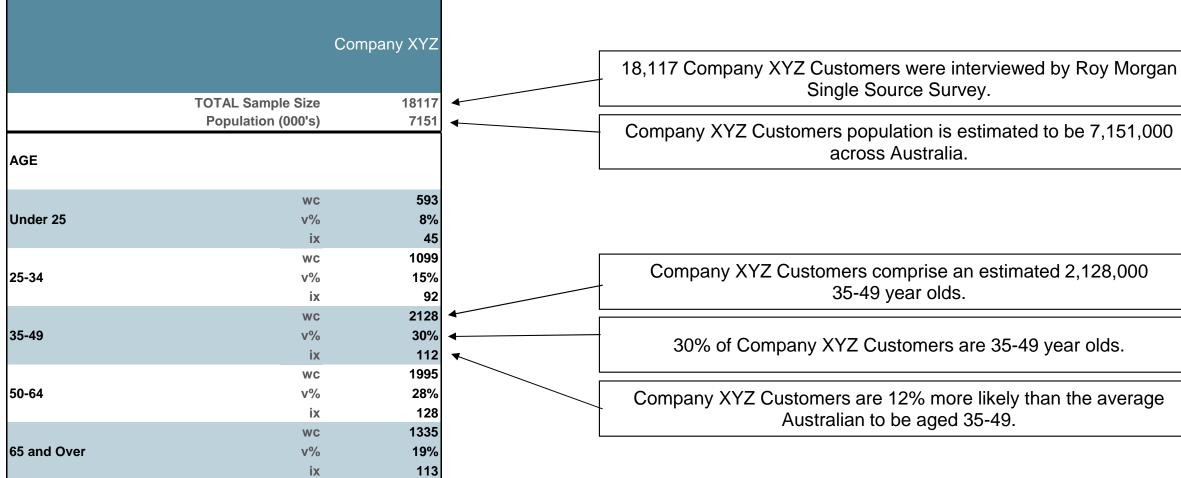

Roy Morgan is the largest independent Australian research company, with major offices in Melbourne & Sydney, and a presence in all other states. Roy Morgan also has a presence in Indonesia, New Zealand, United States and the United Kingdom. A full service research organisation specialising in omnibus and syndicated data, Roy Morgan has over 75 years experience in collecting objective, independent information on consumers. In Australia, Roy Morgan is considered to be the authoritative source of information on financial behaviour, readership, voting intention and consumer confidence. Roy Morgan is a specialist in recontact customised surveys which provide invaluable and effective qualitative and quantitative information regarding customers and target markets.

How to Read - Tables

Legend

Sample size = number of people interviewed in the target profile group.

Population (000's) = projected populationof Australians 14+ in 000's in the target profile group.

Vertical % = the percentage of the target group belonging to the demographic or other group.

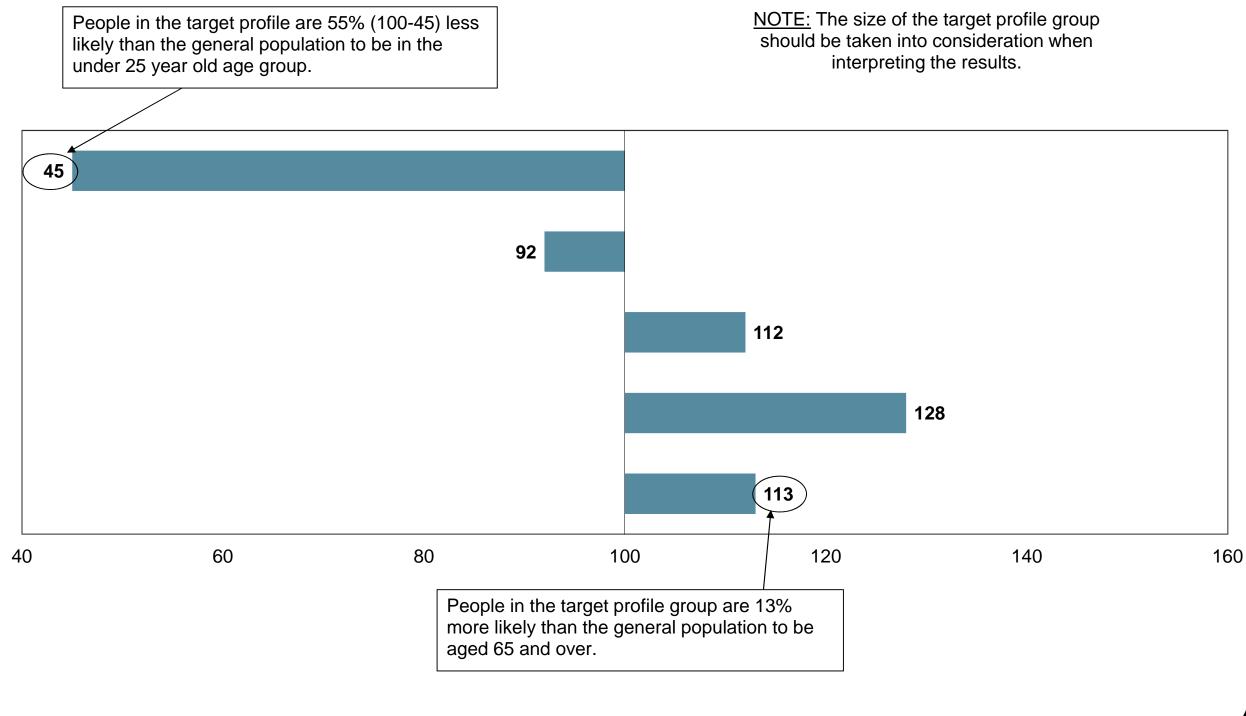

Index = comparison of target profile group to total population (If index = 95, a person from the target profile group is 5% (100-95) less likely than the total population to belong to that particular row group. If index = 108 a person would be 8% more likely to belong to the row group).

How to Read - Charts

All charts are designed to represent a comparison of the target group with the Australian population aged 14+. This is presented using an **Index**. All characteristics on the right of the chart are displayed **more** by the target group than the population. Characteristics on the left of the chart are displayed **less** by the target group than the population. Index = comparison of target profile group to total population (If index = 95, a person from the target profile group is 5% (100-95) less likely than the total population to belong to that particular row group. If index = 108 a person would be 8% **more** likely to belong to the row group)

The world's best research at your fingertips.

With increasingly fierce competition in tough economic times, he or she who understands how his or her customers are thinking, behaving and how their expectations are changing wins.

Nothing is likely to boost your marketing ROI like an intimate appreciation of your customers' needs: how they go about choosing your brand or a competitors' - and how to reach them most cost-effectively.

There may never have been a time when it was more important to base your business decisions on well-conceived, scrupulously conducted research from a reliable, trustworthy company with a proven track record.

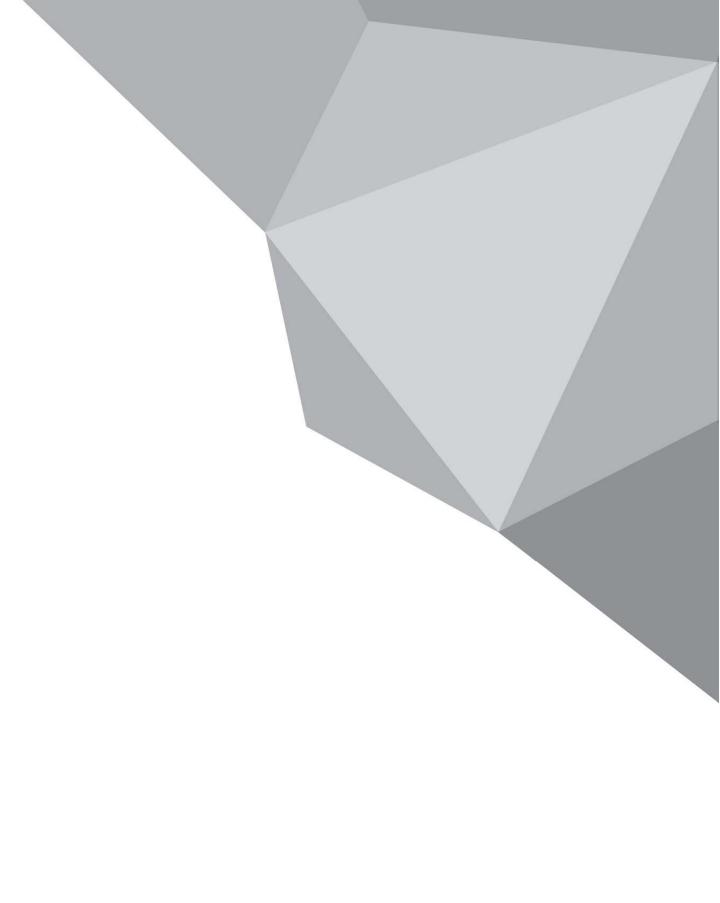

As Australia's longest-established and largest independent research organisation, Roy Morgan Research conducts over 1,000 interviews every week and provides quantitative profiles and reports, many of which are based on hundreds of thousands of personal interviews.

Next time you're about to commission some research, it's worth checking to see if we've already conducted the study with the results available now.

Often, for less than the cost of one focus group you could have an in-depth profile of your customers or key competitors' customers - based on thousands of interviews – backed by the credibility of Australia's leading independent research company. And it can be on your desk within the hour. If you can't find the research you're looking for, there's still a good chance it's available but hasn't made it into our catalogue, so please email us or give us a call on the one-eight-hundred number.

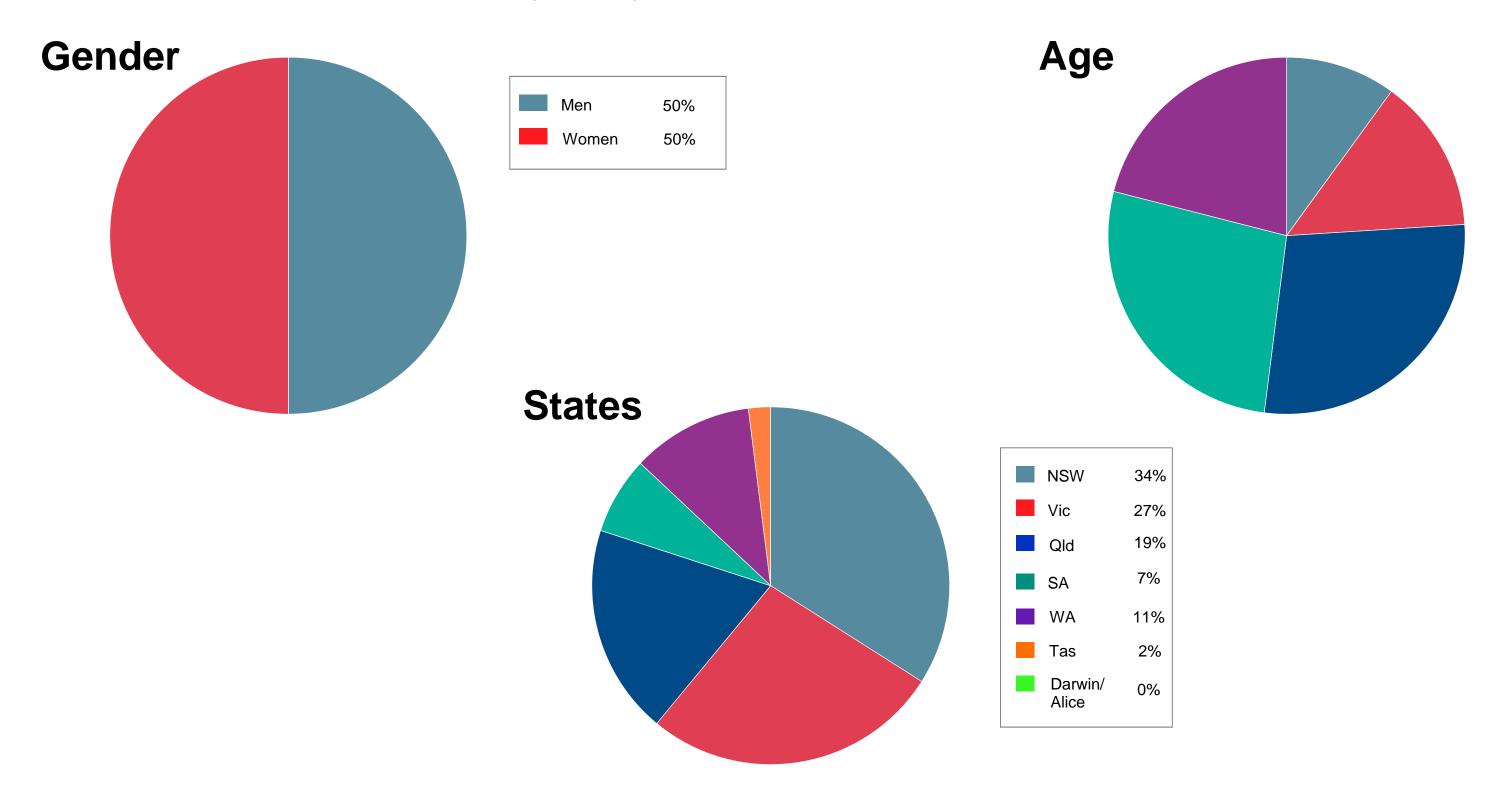

Demographics

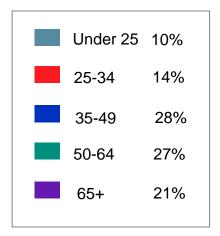

Gender, Age and States

These charts show the profile of the target profile group by Gender, Age and State. There are approximately 11,661,000 people in the target profile group, in Australia.

STATES

Please note that the definition of NSW includes ACT.

SOCIO-ECONOMIC STATUS

Each respondent is given a score of no more than 60 according to their status in each of the following categories:

1. EDUCATION LEVEL OF RESPONDENT

There are twelve possible levels of education. A score of 5 is given to those who completed only some primary school, 10 to those who finished primary school, and so on up to 60 for those who have a degree.

2. INCOME OF RESPONDENT (if respondent is a full time worker)*

There are sixteen possible income levels. A similar scoring procedure is used giving 3 to those in the lowest income groups, up to 60 to those in the highest income group.

3. OCCUPATION OF RESPONDENT (if respondent is a full time worker)*

There are twelve possible occupation levels. Again, each level is scored at approximately 5 point intervals. Professional people receive the highest score.

The respondent's scores for each of these three categories are tallied to give a score out of 180.

We then look at a frequency distribution of the scores and divide the population into five even groups of 20%, ie. quintiles.

The AB quintile is the highest level - people in this quintile have the highest scores.

Approximate breakdowns are:

Score

144+ - 5th or AB quintile 114 - 143 - 4th or C guintile 94 - 113 - 3rd or D quintile 72 - 93 - 2nd or E quintile 0 - 71 - 1st or FG quintile

DISCRETIONARY EXPENDITURE

A large number of questions have been selected from the Roy Morgan Single Source database that deal with a variety of issues such as expenditure, leisure, income and entertainment. The questions selected primarily measure discretionary type expenditure including proposed purchases.

For example:

- Credit cards
- Entertainment including cinema attendance
- Household appliances and furniture
- Mobile phones and Internet
- Travel and accommodation
- Leisure activities
- Personal services, eg. Child care
- Internet purchasing
- Proposed spending on items like a new car
- Fast food
- Wine

Household income is also taken into account. Responses to each question are scored for each respondent with factors applied to the "discretionary level" of spend as well.

Then for each person a total "spending" score is calculated based on their combined responses to the series of "discretionary expenditure" questions. Three groups have been created (each one representing approximately one third of the population 14yrs+) according to their level of discretionary expenditure. We have labelled them:

- Big spenders
- Medium spenders
- Light spenders

* Note - if the respondent is not a full time worker, then the status of the main income earner is considered.

HOUSEHOLD LIFE-CYCLE

The categories are designed as follows:

YOUNG SINGLES: Head of household is aged under 45, respondent is single, and household has no children under 16*.

YOUNG COUPLES: Head of household is aged under 45, respondent is married/de facto, and household has no children under 16*.

YOUNG PARENTS: Head of household is aged under 45, and household has child(ren) under 16 present (also includes single parents).

MID-LIFE FAMILIES: Head of household is aged between 45 and 64, and household has child(ren) under 16 present.

MID-LIFE HOUSEHOLDS: Head of household is aged between 45-64, and household has no children under 16*. **OLDER HOUSEHOLDS:** Head of household is aged 65 or older or retired

Note: For the variables above, children are defined as being under the age of 16 years. If you are seeking details about households with children, regardless of age, use the current living arrangements variable.

* A very small proportion of people in these segments may live in a household where there are children under 16. However such people still qualify for these segments because they are not the parents of those children.

GENERATIONS

The generations on Roy Morgan Single Source are not those we speak of when we think of a generation as the 20-25 year time period it takes for children to become parents. Instead we are describing age cohorts based on birth at particular time periods, especially post World War II. The definitions for these generations vary depending on the source you Google. Baby Boomers can begin at 1943 and go as far as 1964; Gen X can be 1961-81; there are many other variations. There is an argument that says those born in the late 70's have more in common with the early 80's than they do with the early 70's. Everyone has an opinion, there is no agreed consensus. Another consideration is that the larger the time they span, the less cohesive the influences that shape them, especially in a relatively fast changing world. Having looked at all this and found no definitive answer, we weighed the various arguments and elected to go with the following definitions, essentially using 15 year breaks as neither too little nor too much.

Pre 1946: Pre-Boomers 1946-1960: Baby Boomers 1961-1975: Generation X 1976-1990: Generation Y 1991-2005: Generation Z

ROY MORGAN VALUES SEGMENTS*

Competitive and sophisticated organisations face a key marketing challenge. Both their internal and external markets are becoming more diverse and fragmented. A simple, single message may communicate only to the peers of the communicator. As audiences become narrower in focus they are more demanding of relevantly targeted information. People in any case only hear what fits their perception of micro-futures and tune out the hundreds of mass marketing efforts that do not address their goals in life.

In the past it was possible to identify the target audience in terms of birthplace, age, education and income. Consumer markets could also be targeted on the basis of prior purchase behaviour. If it was bought last time, "brand loyalty" might be assumed as the basis of future consumption patterns. With increasing education, income and social mobility comes an increasing degree of individualisation, a reduced acceptance of corporate values, increasing search for diversity, difference and personal development. Market behaviour becomes an opportunity for personal expression, exploration and excitement. These forces conspire to make the task for the marketing and corporate planners very difficult with old instruments.

Demographic analysis of research data can provide an answer to WHO is doing WHAT.

Psychographic analysis can provide information on WHY individuals are behaving in this way.

Standard forms of segmentation can further enhance this description of individual behaviour by adding other things to the equation. They can provide information on which people are more or less likely to say yes or no in their decision to buy your product. However individuals are complex - they rarely behave consistently or according to the box we may choose to put them in. Unless your product is being sold to 60% or more of the population, we simply cannot predict their behaviour in relation to a product or message using demographics, psychographics or even normal segmentations as a typology. A broader model of group behaviour needs to be used if we are to understand some of the most important questions in marketing today:

• What would change a no decision into a yes or vice versa?

What factors influence and predict the behaviours?

• What would happen if your marketing approach to one of those factors were changed?

Some of the factors influencing yes and no decisions are purely demographic - if you don't have any money you cannot usually buy something. Psychographics also play a role, individuals who are image conscious are more likely to say yes to something which makes a good impression on other people. However, unless you are dealing with a truly mass market, generic product, these factors alone will not predict a yes or no decision. We may live next door to, or work with, someone of the same age, sex, income, socioeconomic group, marital status, education and job description and even have the same attitudes and opinions, yet still purchase different products.

and predict the behaviours.

*Devised by Michele Levine of Roy Morgan Research and Colin Benjamin of the Horizons Network.

To develop a predictive model you must also take into account the different forces which shape our behaviour and responses, issues such as Life Satisfaction, Progressiveness, Price & Quality expectations, Innovation, Individualism, etc and their interaction. We must examine the pattern of responses and interrelationships of these issues and how this influences the decision to say yes or no to a product or message. This interrelationship of issues becomes the map. The areas where these issues interact to produce different mindsets and responses to issues amongst groups of people become the individual VALUES SEGMENTS.

Thus, the ROY MORGAN VALUES SEGMENTS* model can be analysed and used in two different ways - to examine the responses of individual Values (a place on the map) or to examine the whole map and the way in which the interrelationship of issues has an impact on people saying yes or no.

Any research company can provide demographic analysis and tell you who is doing what. Most can even provide psychographic analysis and examine why those individuals behaved in that way. Some can even provide market segmentation and group individuals into similar boxes. But only Roy Morgan Research can provide all of these AND answer those critical questions of: what would change a no decision into a yes and: what factors influence

ROY MORGAN VALUES SEGMENTS*

Price Expectations • Innovation • Progressiveness

*Devised by Michele Levine of Roy Morgan Research and Colin Benjamin of the Horizons Network.

ROY MORGAN VALUES SEGMENTS*

Basic Needs

A focus on just 'getting by' from day to day characterises the people in this Segment, generally retirees and pensioners. Avid consumers of free media, they enjoy feeling like they're part of the world around them, even if their disposable income is not large.

Fairer Deal

Finding an escape, if only temporary, from their problems is a priority for people in the Fairer Deal Segment. Generally low-income earners, they feel they've got a rough deal out of life and tend to channel their frustration through loud motorbikes, hotted-up cars,

Traditional Family Life

With time on their hands and grandkids to indulge, this Segment is keen to enjoy a happy, healthy retirement. Traditional family values are important to them, as are sensible consumer choices. Not comfortable with change, they opt for familiarity and trustworthiness when spending their hard-earned dollars.

Conventional Family Life

Solid family values and a responsible attitude characterise people in the Conventional Family Life Segment. Because much of their income goes towards their kids, mortgage and home improvements, this Segment is always on the look-out for products that offer value for money and reliability.

'Look At Me'

Money is for spending not saving according to this Values Segment* — especially on music, fast food and socialising. All about the here and now, Look At Me individuals are usually teenagers who like to live large and loud. Peer-group acceptance is important to them and they're very image conscious.

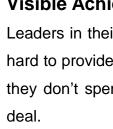

Competitive, ambitious and possibly in debt, Something Better people want the world to see them as winners. Their consumer decisions are strongly influenced by this desire, and they are always seeking something bigger and better: whether it be a house or car, handbag or a favourite restaurant.

Strong believers in sound investments and quality products, the Real Conservatism Segment will always opt for the well-established over the new-fangled. Longing for a world where order and tradition reign, this Segment is loyal to friends, loved ones and brands they can trust.

Whether they're saving the world or purchasing the latest innovative product, Socially Aware individuals like to be well informed before they make a decision. Not surprisingly, they're across all the smartest and in-depth news media and hold p about society.

*Devised by Michele Levine of Roy Morgan Research and Colin Benjamin of the Horizons Network.

© 2019 Written approval must be obtained from Roy Morgan Research before circulation or publication of this data outside the client's institution. Website: store.roymorgan.com

Real Conservatism

Young Optimism

They're young but they think long-term. They may still be at university, but they're planning to head overseas to advance their career. New experiences and personal fulfilment are important to them. They're the Young Optimism Segment and they like to

Visible Achievement

Leaders in their field but confident enough not to show off about it, this Segment works hard to provide their family with the best in life. Although generally high-income earners, they don't spend money for the sake of it and like to be sure they're getting the best

Socially Aware
